

### ***"How was your day?"***

Our project investigates conversations between parents and their children, in order to understand **how children communicate about their school day when they come home.**

#### **Parents who have a child with an Autism Spectrum Disorder**

- **aged 8-12 years (Grades 4, 5 or 6) attending a mainstream Australian primary school, and**
- **who speak English at home, are much needed for our study right now!**

Parents who have a neuro-typical child attending mainstream primary school, aged 8-12 years are also warmly invited to join.

#### **What does it involve?**

- Complete an on-line survey which takes around 30 minutes.

#### **What is in the survey?**

- A Social and Communication Questionnaire about your child,
- A questionnaire about how communications go when you ask your child about their school day, and
- A demographics survey.

All responses are helpful, but the whole survey needs to be completed so we can include it in the research findings. Anonymity will be maintained. Data collection ends July 31<sup>st</sup>, 2018.
